

Claims

1. A colour photographic print material having at least one red-sensitive silver halide emulsion layer containing at least one cyan coupler, at least one green-sensitive silver halide emulsion layer containing at least one magenta coupler and at least one blue-sensitive silver halide emulsion layer containing at least one yellow coupler, characterised in that the magenta coupler is of the formula

in which

$R^1$  means a tertiary alkyl residue,

$Y$  means a hydrogen atom or a halogen atom,

$A$  means an alkylene residue and

$R^2$  means an alkyl residue or an aryl residue and the cyan coupler is of the formula

in which

5             $R^3$        means a hydrogen atom or an alkyl group,

$R^4$        means an alkyl group with at least 8 C atoms,

10            $R^5$        means a halogen atom, a cyano, trifluoromethyl or alkoxy carbonyl group,

$R^6$        means a hydrogen atom or  $R^5$  and

15           Z        means a hydrogen atom or a group eliminable under the conditions of chromogenic development.

2.        A colour photographic print material according to claim 1, characterised in that at least 95 mol% of the silver halides of the silver halide emulsion layers consist of AgCl.

20

3.        A colour photographic print material according to claim 1, characterised in that the yellow coupler belongs to the group of pivaloylacetanilide two-equivalent couplers.
